

## **Farmer Automatic Company Profile**

Farmer Automatic GmbH & Co. KG is one of the world's leading manufacturers and suppliers of economical poultry farming solutions. The traditional company has its offices and production facilities in Laer, Westphalia, Germany. It is a medium-sized company that is one of the major employers in the region. Before founding the long-established German company in 1962, Josef Kühlmann patented the automatic laying nest in 1961. Today, Farmer Automatic offers systems for rearing, layers, and broilers as well as matching accessories and supplementary equipment.

Farmer Automatic places top priority on innovation, quality, service, and reliability. The company has manufactured poultry farming systems for over 50 years – in Germany, from the very beginning, and always in premium quality. All of our systems combine reliability with an advanced, intelligent design. Rigorous material quality inspections and production monitoring ensure the consistently high quality of our systems. Farmer Automatic continually innovates its products in order to accommodate changing market needs.

Apart from our top-quality German products, Farmer Automatic customers appreciate our fast, reliable service. We assist and advise our customers individually and personally throughout the entire process from system planning and installation to servicing. Since we manufacture a large share of our product components in-house, Farmer Automatic can develop systems that are tailored to meet specific customer requirements.

Farmer Automatic distributes its systems through a worldwide network of excellently trained, independent sales representatives. This ensures that the company is in close proximity to its customers, which is very important for products as complex as ours.
